Reasons for Allowance

Allowable Subject Matter

1. Claims 1-16 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a video display controller providing correction when a bus overload/memory underflow condition occurs. Each independent claim identifies the uniquely distinct features "a display data generator connected to the data converter for receiving the converted data and generating temporary display data therefrom using a predefined algorithm", "a holding register connected to the display data generator for storing the generated temporary display data" and "a multiplexer connected to the data converter for receiving the converted data and the holding register for receiving the generated temporary display data, wherein the multiplexer selects and outputs one of the converted data and the generated temporary display data in accordance with a bus overload signal that indicates a predetermined condition of the external bus". The closest prior art, Dierke (USPN: 5850572), Schnizlein et al. (USPN: 6075831), Jeong et al. (USPN: 6229859), and Swan (USPN: 6304297) disclose methods of assuring a memory buffer does not underflow/overflow including inserting temporary data such as null values into the data stream, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
